Sub: Joint recording of moisture at the time of receipt & issue.

Sir,

This office has received many references from CWC stating that most of the FCI offices are not certifying moisture content at the time of receipt and issues. This practice is causing disputes at the time of storage loss regularization and while making recoveries against abnormal storage losses.

2. In this regard, reference may be drawn towards Stock Division, FCI Hqrs circular issued through letter no. STK/RL/Misc./NZ/11/Vol.III/581 dated 12.12.2012 regarding norms for storage loss/ gain in wheat and rice for central pool stocks as per which it was instructed that normative practices for recording the correct moisture content of foodgrains at the time of receipt, during storage and at the time of issue, should be strictly followed by all the Technical and depot personnel engaged in storage and preservation of foodgrains. In order to minimize operational losses in godowns/ warehouses, scientific code of storage practices of foodgrains should invariably be followed by all the technical and depot staff posted at the depots.

3. Futher, instructions regarding recording of moisture content at the time of acceptance of rice stocks are already in place at point no. 7 of Inspection, sampling and analysis procedure to be followed in procurement of paddy and acceptance/ purchase of rice stocks during KMS.

4. As moisture content plays vital role in determining the storage losses involving financial implications, it is advised that moisture content shall be recorded by the Technical staff in the presence of depot staff using duly calibrated moisture meter. A separate register will be maintained for recording joint moisture content which will be jointly signed by TA/M (QC)/M (D).

5. At the time of wagon receipt and issue of stocks in agency godowns, moisture content is to be recorded jointly by FCI and agency godown staff to avoid conflicts at the time of regularization of losses. Further, in order to determine the 'issue moisture' of a stack, apart from periphery, samples from core covering all the blocks of the stack should be taken (as and when it is issued) and moisture content be recorded to arrive at average moisture content of the stack.

Therefore, all the GMs(Region) are requested to advise the field functionaries to comply with the above instructions.

भवदीय
