IISFM Project

A. BACKGROUND

Ministry of CAF & PD sanctioned the IISFM Project as a Plan Scheme, with a total estimated cost of Rs. 96.74 Crore in Aug’03, to put in place an on-line MIS of the stock position in any FCI Depot. National Informatics Centre (NIC) is the overall consultant, on turnkey basis, including study, design and development of application software. National Informatics Centre Services Incorporated (NICSi) had supplied the hardware, software and support services. The scope of the project was widened in July’05 to include ‘Financial Accounting of FCI’ & ‘Computerization of State Agencies’ of major procuring/distributing States.

B. SOFTWARE IMPLEMENTATION STATUS

I) DISFM (DISTRICT STOCK ACCOUNTING SOFTWARE)

The application is fully functional at 169 FCI District Offices. The authenticated fortnightly Stock and Off-take MIS reports, along with State/UT-wise reports are available at www.egrains.nic.in.

II) IRRS (IISFM RAPID REPORTING SERVICE)

The on-line, simplified depot application (IRRS) has been implemented in all depots across the country. Most of the depots are updating stock information on a daily basis. MIS reports on stock position, offtake, capacity utilization, storage/transit loss/gain etc. from 01.07.2010 onwards are available at http://egrains.nic.in. IRRS generated reports are being used for decision making at various levels.

III) DEPOT CODE MANAGEMENT SYSTEM (DCMS)

A web-based software to automate the hiring/de-hiring process of depots, Depot Code Management System (DCMS) has been developed and implemented at all FCI District/Regional offices, for updation of depot capacity, category etc. This application has been successfully integrated with IRRS and is helping in managing the hiring/de-hiring of depots, their codification, changes in storage capacity etc.
